

IMPORTANT

POWERSUN^{UV}

SELF-BALLASTED MERCURY VAPOR FLOOD LAMP

ITEM#

PUV-10 160W

PUV-11 100W

MOUNTING INSTRUCTIONS

PLEASE READ AND SAVE FOR REFERENCE

CORRECT

***MOUNT STRAIGHT
DOWN.***

INCORRECT

***DO NOT MOUNT AT
AN ANGLE!***

- 1. The PowerSun UV must be mounted in a vertically oriented fixture so that the lamp points straight down, not at an angle (see diagram). Mounting this lamp at an angle will reduce its "burn life" and void any guarantee.**

2. If your PowerSun UV lamp seems to shut off or "cut out" for no apparent reason, one of the following conditions may exist:

A. *The power being supplied to your outlet is inappropriate or fluctuating.*

Small changes in line voltage can trip the lamp's reset mechanism. If the voltage is consistently low (i.e. less than 110 volts) then the lamp will not be able to function properly. Check with your local utility or your electrician to verify your voltage.

"Overdriving" the lamp (i.e. higher voltage levels) by as little as 10% can decrease burn life by more than 50% and would void any guarantee.

B. *There is too much heat in or around your terrarium and the lamp.*

The PowerSun UV's thermal reset feature will shut the lamp off for a cool down period if it gets too hot. Using the lamp in a place or fixture that is not well ventilated can sometimes cause heat buildup. If the lamp occasionally shuts off to cool down and later restarts (usually about 15 minutes), this is normal; however, if the lamp shuts off **all the time** or for **several hours at a time**, see the warranty section of your instructions.

SUPER SPECIAL MAIL IN OFFER!

\$3.00
